# Methodology

SSS Bulletin is an open-source security incident coding product. Candidate reports are drawn from the RSS feeds and online editions of major Pakistani national dailies — principally Dawn, Express Tribune, The News, Geo News, and The Nation.

Each candidate item is structured by automated language processing into a fixed schema. A human reviewer then confirms or rejects the structured record against the source text before any record is marked published.

Casualty figures reflect what is reported in the cited open sources at the time of coding. Geographic coordinates on the map are approximate.

# Corrections

---

No corrections recorded for this report.
